

## AMENDMENTS TO THE CLAIMS

**Claim 1 (Currently Amended)** A home terminal apparatus connected to a router via a home network and for sending/receiving packet data to and from ~~a~~ the router ~~that is~~ connected to an external network to which a server apparatus is connected, ~~the~~ said home terminal apparatus ~~being connected to the router via a home network,~~ comprising:

a packet generation unit operable to generate packet data to be sent to the server apparatus via the router;

a protocol determination unit operable to determine a communication protocol used between ~~the~~ said home terminal apparatus and the server apparatus; and

a communication unit operable to send/receive the packet data to and from the server apparatus via the router,

wherein ~~the~~ said protocol determination unit is operable to determine ~~determines~~ that ~~the~~ said home terminal apparatus ~~should~~ is to communicate with the server apparatus using (i) a first communication protocol, being a User Datagram Protocol (UDP), when ~~the~~ said communication unit sends address notification packet data generated by ~~the~~ said packet generation unit to the server apparatus periodically and repeatedly at a predetermined sending interval via the router, and (ii) a second communication protocol, being a Transmission Control Protocol (TCP), when ~~the~~ said communication unit sends/receives control information to and from the server apparatus.

**Claim 2 (Currently Amended)** The home terminal apparatus according to Claim 1, wherein when ~~the~~ said communication unit receives, from the server apparatus, a notification packet indicating an occurrence of a control request to control ~~the~~ said home terminal apparatus~~[[,]]~~:

~~the~~ said packet generation unit is operable to generate ~~generates~~ a connection request packet, which is a packet for making a connection request to establish a connection to the server apparatus~~[[,]]~~;

~~the~~ said protocol determination unit is operable to determine ~~determines~~ that the connection request packet ~~should~~ is to be communicated using the second communication protocol~~[[,]]~~; and

~~the~~ said communication unit is operable to receive ~~receives~~, from the server apparatus, control packet data, which is data including the control request, after the connection is

established ~~to~~ between the server apparatus and said home terminal apparatus using the second communication protocol.

**Claim 3 (Cancelled)**

**Claim 4 (Currently Amended)** The home terminal apparatus according to Claim 2, further comprising a management unit operable to manage a certificate, which is a certificate for verifying to verify validity of ~~the~~ said home terminal apparatus,

wherein ~~the~~ said communication unit is operable to send-sends, to the server apparatus, ~~said the~~ the certificate managed by ~~the~~ said management unit, after receiving the notification packet.

**Claim 5 (Currently Amended)** The home terminal apparatus according to Claim 2, wherein:

~~wherein the~~ said packet generation unit is operable to generate-generates an inquiry packet, which is a packet for inquiring the server apparatus about the control request, when the connection is established to the server apparatus using the second communication protocol[[,]]; and

~~the~~ said communication unit is operable to send-sends ~~said the~~ the inquiry packet to the server apparatus via the router.

**Claim 6 (Currently Amended)** The home terminal apparatus according to Claim 1, further comprising an authentication unit operable to ~~perform authentication on~~ authenticate the server apparatus as a communication partner using a server certificate, which is a certificate for verifying validity of the server apparatus as the communication partner.;

~~wherein the authentication unit performs the authentication on the server apparatus using a server certificate to verify validity of the server apparatus as a communication partner.~~

**Claim 7 (Currently Amended)** The home terminal apparatus according to Claim 6, wherein ~~the~~ said authentication unit is operable to authenticate-performs the authentication on the validity of the server apparatus as ~~a~~ the communication partner ~~using one of the following~~ an IP address of the server apparatus and/or terminal ID information unique to said home terminal

apparatus, which is information included in the packet data received by ~~the~~ said communication unit: ~~an IP address of the server apparatus; and terminal ID information unique to the home terminal apparatus.~~

**Claim 8 (Currently Amended)** The home terminal apparatus according to Claim 6, wherein ~~the~~ said authentication unit is operable to destroy ~~destroys~~ the packet data, when ~~the~~ said communication unit receives ~~said~~ the packet data within a predetermined interval.

**Claim 9 (Currently Amended)** The home terminal apparatus according to Claim 1, further comprising an encryption unit operable to encrypt data in a channel between ~~the~~ said home terminal apparatus and the server apparatus that uses the second communication protocol, when the control information is sent/received to and from the server apparatus.

**Claim 10 (Currently Amended)** The home terminal apparatus according to Claim 9, wherein ~~the~~ said encryption unit uses SSL to encrypt the data in the channel.

**Claim 11 (Currently Amended)** The home terminal apparatus according to Claim 1, further comprising a control unit operable to control ~~the~~ said home terminal apparatus according to the control information.

**Claim 12 (Currently Amended)** The home terminal apparatus according to Claim 11, wherein:  
       a plurality of terminal apparatuses are connected to ~~the~~ said home terminal apparatus via the home network[[,]];

      each of the terminal apparatuses includes an apparatus control unit operable to control ~~said each of the terminal apparatus, respectively~~ apparatuses itself[[,]];

~~the~~ said communication unit is operable to send ~~sends~~ the control information to each of the terminal apparatuses[[,]]; and

~~the~~ each of the apparatus control-unit units is operable to control ~~controls said~~ each of the terminal apparatuses, respectively, according to the control information.

**Claim 13 (Currently Amended)** The home terminal apparatus according to Claim 1, wherein the server apparatus includes:

a second communication unit operable to send/receive packet data to and from said home terminal apparatus via the router; and

a second packet generation unit operable to generate the packet data to be sent to ~~the~~ said home terminal apparatus,

wherein the second packet generation unit is operable to generate ~~generates the a~~ notification packet indicating an ~~the~~ occurrence of ~~the a~~ control request to control ~~the~~ said home terminal apparatus, when ~~said the~~ control request occurs ~~occurred~~ in the server apparatus, and

wherein the second communication unit is operable to send ~~sends said the~~ notification packet to ~~the~~ said home terminal apparatus via the router.

**Claim 14 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein:

\_\_\_\_\_ a mobile terminal device is ~~further~~ connected to the external network, the mobile terminal device being ~~capable of sending~~ operable to send the control request to control ~~the~~ said ~~specific~~ home terminal apparatus<sub>[[,]]</sub>; and

the second packet generation unit is operable to generate ~~generates~~ the notification packet<sub>[[,]]</sub> when the second communication unit receives the control request from the mobile terminal device.

**Claim 15 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein:

~~wherein~~ the second packet generation unit is operable to generate ~~generates~~ the control packet data including the control request<sub>[[,]]</sub>; and

the second communication unit is operable to send ~~sends said the~~ control packet data to ~~the~~ said home terminal apparatus via the router, after the connection is established ~~to the~~ between said home terminal apparatus and the server apparatus using the second communication protocol.

**Claim 16 (Currently Amended)** The home terminal apparatus according to Claim 15, wherein the second communication unit is operable to send ~~sends~~ the control packet data to ~~the~~

said home terminal apparatus via the router, only when the control request ~~occurs-occurred~~ in the server apparatus.

**Claim 17 (Currently Amended)** The home terminal apparatus according to Claim 15, wherein the second communication unit is operable to send-sends the control packet data to ~~the~~ said home terminal apparatus via the router, only when receiving, from ~~the~~ said home terminal apparatus, an inquiry packet for inquiring about the control request.

**Claim 18 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein:

~~wherein~~ the server apparatus further includes:

\_\_\_\_\_ a terminal information storage unit operable to store, as terminal information, a terminal ID of said home terminal apparatus, a global address of the router which is an address of a sender, and a global port number of the router which is a port number of the sender ~~the following, which is~~ information included in the packet data received by the second communication unit ~~as terminal information: a terminal ID of the home terminal apparatus; a global address of the router which is a sender's address; and a global port number of the router which is a sender's port number; and~~

\_\_\_\_\_ an extraction unit operable to extract, from the terminal information storage unit, the global address and the global port number which correspond to the terminal ID, when the control request to control ~~the~~ said home terminal apparatus with the-said terminal ID occurs ~~occurred~~ in the server apparatus~~[[,]]~~; and

~~wherein~~ the second packet generation unit is operable to generate-generates the notification packet that includes notification information, the notification information being information indicating the occurrence of the control request, and the notification packet including, respectively as a destination address and a destination port number, the global address and the global port number extracted by the extraction unit.

**Claim 19 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein:

~~wherein~~ the server apparatus further includes a second management unit operable to manage a server certificate, which is a certificate for verifying to verify validity of the server apparatus[[,]]; and

~~wherein~~ the second communication unit is operable to send-sends, to the said home terminal apparatus, ~~said the~~ server certificate managed by the second management unit, after receiving, from the said home terminal apparatus, the connection request packet, which is a packet for requesting a connection to the server apparatus using the second communication protocol.

**Claim 20 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein the server apparatus further includes a second authentication unit operable to authenticate-perform authentication on the said home terminal apparatus as a communication partner using a certificate, which is a certificate for verifying validity of said home terminal apparatus as the communication partner;

~~wherein the second authentication unit performs the authentication on the home terminal apparatus using a certificate to verify validity of the home terminal apparatus as a communication partner.~~

**Claim 21 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein the server apparatus further includes a second encryption unit operable to encrypt data in a channel between the said home terminal apparatus and the server apparatus that uses the second communication protocol[[,]] when the control information is sent/received to and from the said home terminal apparatus.

**Claim 22 (Currently Amended)** The home terminal apparatus according to Claim 13, wherein:

an application server is connected to the external network;

~~wherein an application server is further connected to the external network;~~

the second packet generation unit ~~in~~ of the server apparatus is operable to generate ~~generates~~ the notification packet indicating the occurrence of the control request, the notification packet including an application server identifier for identifying the application server[[,]];

the second communication unit is operable to send the~~sends said~~ notification packet to the said home terminal apparatus via the router[[,]];

~~the~~said home terminal apparatus further comprises:

\_\_\_\_\_ a storage unit operable to store application server identifier/address information ~~made up of~~ including at least the application server identifier and an address of the application server; and

\_\_\_\_\_ an extraction unit operable to extract, from the application server identifier/address information stored by ~~the~~ said storage unit, the address of the application server that corresponds to the application server identifier included in the notification packet, when ~~the~~ said communication unit receives ~~said~~ the notification packet from the router[[,]]; and

~~wherein the~~said packet generation unit is operable to generate~~generates~~ the connection request packet, which is a packet that describes the address of the application server as a destination address.

**Claim 23 (Currently Amended)** The home terminal apparatus according to Claim 22, wherein:

~~wherein the~~said storage unit is operable to additionally stores store a port number of the application server to the application server identifier/address information[[,]];

~~the~~said extraction unit is operable to extract~~extracts~~, from the application server identifier/address information stored by ~~the~~ said storage unit, the address of the application server and the port number of the application server that correspond to the application server identifier included in the notification packet, when ~~the~~ said communication unit receives ~~said~~ the notification packet from the router[[,]];

~~the~~said packet generation unit is operable to generate~~generates~~ the connection request packet that describes the address of the application server as ~~a~~ the destination address and the port number of the application server as a destination port number[[,]]; and

~~the~~said communication unit is operable to send the~~sends said~~ connection request packet to the server apparatus via the router.

**Claim 24 (Currently Amended)** The home terminal apparatus according to Claim 22, wherein:

~~wherein the~~said storage unit is operable to store ~~further stores~~ the application server identifier/address information that includes the application server identifier and a URL of the application server[[,]];

~~the~~said extraction unit is operable to extract ~~extracts~~, from the application server identifier/address information stored by ~~the~~ said storage unit, the URL of the application server that corresponds to the application server identifier included in the notification packet, when ~~the~~ said communication unit receives ~~said~~ the notification packet from the router[[,]]; and

~~the~~said communication unit is operable to send ~~sends~~ the connection request packet to the URL.

**Claim 25 (Currently Amended)** The home terminal apparatus according to Claim 24, wherein:

~~wherein~~ an address list notification server is ~~further~~ connected to the external network[[,]];

the address list notification server includes a sending unit operable to send, to ~~the~~ said home terminal apparatus, an address list notification packet, which is a packet including another application server identifier/address information via the router[[,]]; and

~~the~~said home terminal apparatus further comprises an update unit operable to update the application server identifier/address information stored by ~~the~~ said storage unit, on the basis of ~~said~~ the another application server identifier/address information included in the received address list notification packet from the router.

**Claim 26 (Original)** The home terminal apparatus according to Claim 1, wherein the router is directly connected to the external network, not via an internet service provider.

**Claim 27 (Currently Amended)** A communication system comprising:

a server apparatus connected to an external network;

a home terminal apparatus connected to a home network; and

a router which connects the external network and the home network, wherein:

\_\_\_\_\_ ~~wherein the~~said home terminal apparatus includes:

\_\_\_\_\_ a packet generation unit operable to generate packet data to be sent to ~~the~~ said server apparatus via said router;

\_\_\_\_\_ a protocol determination unit operable to determine a communication protocol used between ~~the~~ said home terminal apparatus and ~~the~~ said server apparatus; and

\_\_\_\_\_ a communication unit operable to send/receive the packet data to and from ~~the~~ said server apparatus via the said router[[,]]; ~~and~~

~~the~~ said server apparatus includes:

\_\_\_\_\_ a second communication unit operable to send/receive packet data; and

\_\_\_\_\_ a second packet generation unit operable to generate the packet data to be sent to ~~the~~ said home terminal apparatus[[,]]; and

~~the~~ said protocol determination unit is operable to determine ~~determines~~ that ~~the~~ said home terminal apparatus ~~should~~ is to communicate with ~~the~~ said server apparatus using (i) a first communication protocol, being a User Datagram Protocol (UDP), when ~~the~~ said communication unit sends address notification packet data generated by ~~the~~ said packet generation unit to ~~the~~ said server apparatus periodically and repeatedly at a predetermined sending interval via the said router, and (ii) a second communication protocol, being a Transmission Control Protocol (TCP), when ~~the~~ said communication unit sends/receives control information to and from ~~the~~ said server apparatus.

**Claim 28 (Currently Amended)** The communication system according to Claim 27, wherein;

\_\_\_\_\_ ~~the~~ said second packet generation unit ~~in the~~ of said server apparatus is operable to generate ~~generates~~ a notification packet indicating an occurrence of a control request to control ~~the~~ said home terminal apparatus, when ~~said~~ the control request occurs ~~occurred~~ in ~~the~~ said server apparatus[[,]];

~~the~~ said second communication unit is operable to send ~~the~~ sends ~~said~~ notification packet to ~~the~~ said home terminal apparatus via the said router[[,]];

when ~~the~~ said communication unit ~~in the~~ of said home terminal apparatus receives the notification packet from ~~the~~ said server apparatus, ~~the~~ said packet generation unit is operable to generate ~~generates~~ a connection request packet for making a connection request, which is a request to establish a connection to ~~the~~ said server apparatus, and ~~the~~ said protocol determination

unit ~~is operable to determine~~ determines that the connection request packet ~~should~~ is to be communicated using the second communication protocol[[],]; and

~~the~~said communication unit is operable to receive ~~receives~~, from ~~the~~ said server apparatus, control packet data, which is data including the control request, after the connection is established ~~between to the~~ said server apparatus and said home terminal apparatus using the second communication protocol.

**Claim 29 (Currently Amended)** A communication method in which an external network to which a server apparatus is connected and a home network to which a home terminal apparatus is connected are connected via a router, ~~the~~ said communication method comprising home terminal apparatus steps-A executed by the home terminal apparatus and server apparatus steps-B executed by the server apparatus,

wherein the home terminal apparatus steps-A include:

\_\_\_\_\_ ~~a packet generation step of generating packet data to be sent to the server apparatus via the router;~~

\_\_\_\_\_ ~~a protocol determination step of determining a communication protocol used between the home terminal apparatus and the server apparatus; and~~

\_\_\_\_\_ ~~a communication step of sending/receiving the packet data to and from the server apparatus via the router,~~

wherein the server apparatus steps-B include:

\_\_\_\_\_ ~~a second communication step of sending/receiving packet data to and from the home terminal apparatus via the router; and~~

\_\_\_\_\_ ~~a second packet generation step of generating the packet data to be sent to the home terminal apparatus, and~~

wherein, said determining of the communication in the protocol determination step, it is determined includes determining that the home terminal apparatus ~~should~~ is to communicate with the server apparatus using (i) a first communication protocol, being a User Datagram Protocol (UDP), when address notification packet data, which is packet data generated in said the generating of the packet data executed by the home terminal apparatus, ~~generation step~~ is sent to the server apparatus periodically and repeatedly at a predetermined sending interval via the router ~~in the~~ said sending/receiving of the packet data executed by the home terminal apparatus

~~communication step~~, and (ii) a second communication protocol, being a Transmission Control Protocol (TCP), when control information is sent/received to and from the server apparatus in said sending/receiving of the packet data executed by the home terminal apparatus~~the communication step~~.

#### **Claims 30-32 (Cancelled)**

**Claim 33 (Currently Amended)** The home terminal apparatus according to Claim 2, wherein the server apparatus includes:

a second communication unit operable to send/receive packet data to and from said home terminal apparatus via the router; and

a second packet generation unit operable to generate the packet data to be sent to ~~the~~ said home terminal apparatus,

wherein the second packet generation unit is operable to generate~~generates~~ the notification packet indicating the occurrence of the control request to control ~~the~~ said home terminal apparatus, when ~~said~~ the control request occurs~~occurred~~ in the server apparatus, and

wherein the second communication unit is operable to send~~sends~~ ~~said~~ the notification packet to ~~the~~ said home terminal apparatus via the router.

#### **Claims 34-37 (Cancelled)**

**Claim 38 (New)** A program stored on a computer-readable storage medium for causing a home terminal apparatus connected to a router via a home network to send/receive packet data to and from the router connected to an external network to which a server apparatus is connected, said program causing an execution of home terminal apparatus steps by the home terminal apparatus and an execution of server apparatus steps by the server apparatus, wherein:

the home terminal apparatus steps include:

generating packet data to be sent to the server apparatus via the router;

determining a communication protocol used between the home terminal apparatus and the server apparatus; and

sending/receiving the packet data to and from the server apparatus via the router;  
and

said determining of the communication protocol includes determining that the home terminal apparatus is to communicate with the server apparatus using (i) a first communication protocol, being a User Datagram Protocol (UDP), when address notification packet data, which is packet data generated in said generating of the packet data, is sent to the server apparatus periodically and repeatedly at a predetermined sending interval via the router in said sending/receiving of the packet data, and (ii) a second communication protocol, being a Transmission Control Protocol (TCP), when control information is sent/received to and from the server apparatus in said sending/receiving of the packet data.

**Claim 39 (New)** The program according to claim 38, wherein the server apparatus steps include:

sending/receiving packet data to and from the home terminal apparatus via the router;  
generating the packet data to be sent to the home terminal apparatus; and  
generating a notification packet indicating an occurrence of a control request to control the home terminal apparatus when the control request occurs in the server apparatus and sending the notification packet to the home terminal apparatus via the router.

**Claim 40 (New)** The program according to claim 38 wherein the home terminal apparatus steps further include:

generating a connection request packet, which is a packet for making a connection request to establish a connection to the server apparatus;  
determining that the connection request packet is to be communicated using the second communication protocol; and  
receiving, from the server apparatus, control packet data, which is data including a control request, after the connection is established between the server apparatus and the home terminal apparatus using the second communication protocol.

**Claim 41 (New)** The program according to claim 39, wherein the home terminal apparatus steps further include:

generating a connection request packet, which is a packet for making a connection request to establish a connection to the server apparatus;

determining that the connection request packet is to be communicated using the second communication protocol; and

receiving, from the server apparatus, control packet data, which is data including the control request, after the connection is established between the server apparatus and the home terminal apparatus using the second communication protocol.
